

## Incanto – Testing Business Rules Systems

### Avoiding Costly Errors

An incorrect strategy implemented across a database of many thousands of customers can have an enormous impact on the bottom line – or a single big mistake can expose your company to a PR disaster. **Incanto** makes it possible to quickly and easily automate the testing of business rules systems, substantially reducing these risks.

### Testing with Incanto

- **Incanto** testing processes ensure that business rules systems are implemented correctly
- **Incanto** tests business rules processing with millions of test cases, in hours not weeks
- **Incanto** allows the user to see the path travelled by any test case, guaranteeing that business rules behave as expected

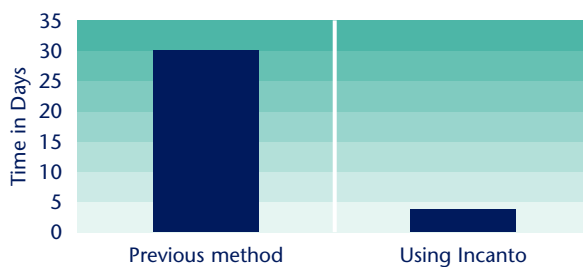

### The Testing Process

- Use a business rules system to test a business rules system
- Replicate existing strategies in **Incanto's** fast development environment
- Create comprehensive test data using **Incanto's** integral test tools
- Run the test data through both systems and compare the results.

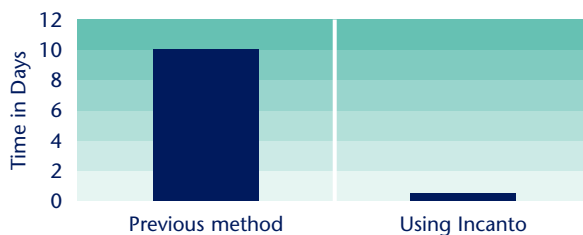

### How it worked for Lloyds TSB

- 85% time saved in business rules development and testing
- 95% time saved in business rules modification and testing
- Comprehensive regression test runs in under half a day – 2 million test cases through 1600+ paths

### Loans Project: Development Time Saved

### Loans Project: Ongoing Modifications - Time Saved
